CHILLER – FREEZER THERMOSTAT
Model RN5+ (COMPATIBLE WITH RN2 / RN3 / RN4 / RN4+ / RN5)

KIOUR

ATTENTION

Read carefully these instructions before installing and using this device and keep them for future reference. Attention to installation and electrical wiring. Use this device only as described in this document and never use itself as a security device. Disconnect the power supply before performing any type of maintenance operation. Do not expose the device to liquid leakage, high temperatures over +55ºC, high humidity over 80%. The device must be disposed of in accordance with local standards for the collection of electrical and electronic equipment.

DESCRIPTION

RN5+ is a thermostat for chiller or freezer cabinet, without plastic enclosure, suitable for all applications including the ones with anti-explosive standards and has the following specifications: room and evaporator temperature is controlled with NTC / PTC sensors; 3 indication digits with resolution 0.5°C and 5 buttons; one serial input for controlling the cabinet's door; 5 relays: compressor 30A 250VAC, fan 10A 250VAC, deFrost 10A 250VAC, lamp 10A 250VAC and door resistance in chillers or drainage resistance in freezers 10A 250VAC; defrosting may be electric or by hot gas; a buzzer in case of an alarm; a serial data port in order to connect either to cloud online IoT platform Cortex or to a computer via CAMIN software for full monitoring and data logging of the device (see page 2 – Serial input of the thermostat). The device is mounted through panel hole and secured by screws.

THERMOSTAT'S DIMENSIONS

ATTENTION: Read carefully the technical specifications and make sure that the working conditions are appropriate. According to safety standards, the device must be fastened in such a way that it cannot be removed without the use of tools.

Dimensions are in mm. The device is mounted through panel hole and secured by 3 screws (Φ=3mm).
INDICATIONS AND BUTTONS FUNCTION

Display indications	
❄	compressor ON
dFr	deFrost ON
💨	fan ON
⚠	alarm ON
Loc 🔑	keyboard locked
🔧	malfunction ON
- - -	evaporator's sensor is deactivated
Keyboard	
↵	enter/exit the parameter's menu confirm new value of a parameter
SET	display the parameter's value manual deFrost
💡	ON/OFF lamp
▼	down arrow mute buzzer ON/OFF cabinet
▲ T2	up arrow display the evaporator temperature T2 (and the room temperature if Set Point is constantly displayed)

For more indications regarding the <u>alarms</u> please see the alarm's table at page 6.

UNLOCKING THE THERMOSTAT

By pressing at the same time ▼ ▲(T2) for 3 seconds, the countdown starts and the keyboard unlocks while the yellow small key on the display turns off. Instantly the temperature measurement unit ºC/ºF is displayed. The keyboard locks automatically after 60 seconds of inertia.

ADJUSTING ROOM'S TEMPERATURE – SET POINT

1. Unlock the keyboard by pressing at the same time ▼ ▲(T2) and the countdown starts for 3 seconds.
2. Press ↵ to display the first parameter **SPo.**
3. Press SET to display its value. With ▼ or ▲(T2) change its value.
4. Press ↵ to save the new value. The cabinet is working properly with the new adjustment.

INDUSTRIAL FACTORY SETTINGS OF CABINET

1. Choose from the following table the corresponding program of your cabinet.

2. Unlock the keyboard by pressing at the same time ⊙ ⊙ and the countdown starts for 3 seconds.

3. Press ⏎ to display the first parameter **SPo**. Press 4 times ⊙ and the parameter **Cod** is displayed.

4. Press ⊙ to display its value and press ⊙ to enter the cabinet's program. Press ⏎ to store the cabinet's program to parameter **Cod**.

5. Press ⏎ again to exit the parameter menu. The indication "YES" is displayed and all appropriate settings are now stored.

6. Toggle cabinet's power supply in order to work properly and based on the registered settings.

Cabinet's model	Program
Upright chiller with freon R134a	33
Upright chiller with propane R290	38
Upright freezer with stainless door with freon R404A	36
Upright freezer with stainless door with propane R290	34
Upright freezer with glass door with freon R404A	37
Upright freezer with glass door with propane R290	35
Refrigerated counters	31
Saladette	32

CAUTION!

When the temperature probe is PTC, parameter 27

must be changed to **SEn = 0**

PTC probes are as shown in the image:

⏻ ON / OFF CABINET

1. To activate the cabinet, press for 3 seconds ⊙ .

2. To deactivate the cabinet, unlock the keyboard by pressing at the same time ⊙ ⊙ and the countdown starts for 3 seconds. Press for 3 seconds ⊙ .

CABINET'S LIGHT

1. If the cabinet has a light, press and hold ⊙ to turn it ON or OFF.

MANUAL DEFROST

1. Unlock the keyboard by pressing at the same time ⊙ ⊙ and the countdown starts for 3 seconds.

2. Press for 3 seconds ⊙ to start a manual defrost with duration based on the parameter **dd2** (table page 3).

*For more information regarding the defrost check the description of parameter **dt6** (table at page 4 - parameter No 11).*

INDICATION OF THE EVAPORATOR'S TEMPERATURE T2 (AND ROOM'S TEMPERATURE WHEN THE SET POINT IS CONSTANTLY DISPLAYED)

1. Unlock the keyboard by pressing at the same time ⊙ ⊙ and the countdown starts for 3 seconds.

2. Press and hold ⊙ to display the evaporator's temperature for 2 seconds and then the cabinet's temperature (if parameter **diP** is adjusted to constantly display the Set Point and not the room's temperature).

3. If the evaporator's temperature is deactivated from the parameter **OS2,** it is displayed "- - -".

PROGRAMMING A PARAMETER

ATTENTION: to gain full access to the parameter's menu, the 5th parameter **Cod** must be adjusted to **22** *(see parameter table page 4).*

1. Unlock the keyboard by pressing at the same time ⊙ ⊙ and the countdown starts for 3 seconds.

2. Press ⏎ to enter the parameter menu.

3. Choose the parameter you want to adjust by pressing ⊙ or ⊙ and press ⊙ to display its value.

4. Press ⊙ or ⊙ to change its value and then press ⏎ to store the new value.

   Press ⊙ if you want to cancel the new value and the parameter's name is displayed.

5. Press ⏎ to exit the parameter menu.

TECHNICAL SPECIFICATIONS OF THE THERMOSTAT

Model **RN+** power supply: 230VAC 50/60Hz / Maximum power consumption: 3W. Model **RNW+** switching power supply 100-264VAC 50/60Hz 5W

It is recommended using a power supply safety fuse: 0.5A (not included)

Room and evaporator temperature sensors NTC 10K 1% 25°C IP68 with rubber tube and temperature range -50÷+112°C (-58÷+230°F) or PTC 1K 25ºC with metal tube and temperature range -50÷+150°C (-58÷+302°F) / Accuracy: ±0.5°C

Alarm buzzer / Serial input with 5pin connector / Digital input door

5 anti-explosive relays: compressor relay 30A res. 250VAC normally open contact / fan relay 10A res. normally open contact / defrost relay 10A res. normally open contact / lamp relay 10A res. normally open contact / door resistance relay or drainage resistance 10A res. normally open contact / Max current load 16A.

Connections: cable cross section 2.5 mm² for all relays / cable cross section from 0.25 to 1.0 mm² for the sensors and door switch / ⚠ Use cable with appropriate temperature ratings – terminal block temperature possible rise above 60°C

Connections with terminal blocks 18A using cable with cable cross section up to 2.5 mm² / It is recommended using a torque wrench with maximum torque 0.4Nm

Operating temperature: -15÷+55°C / Storage temperature: -20÷+80°C

No plastic enclosure / Protection IP 00 / Device Class: 2

The device is mounted on appropriate panel holes and secured with 3 screws (Φ=3mm). The holes are created only for button and display access. An appropriate membrane with protection IP65 must be placed over the panel to secure the device from liquid leakage and human interference.

Firmware: V4.0

SERIAL INPUT OF THE THERMOSTAT

RN5+ connects via serial input to cloud IoT and the online CORTEX platform or to a local computer with the CAMIN program or to any Modbus network.
- Cloud and CORTEX platform: connection to the cloud and the CORTEX platform for monitoring - recording and managing the thermostat from your mobile, tablet or any computer.
- CAMIN program: local connection and monitoring - recording and management of the thermostat through the CAMIN program installed on a local computer.

ELECTRICAL DIAGRAM OF THE THERMOSTAT

ATTENTION: according to safety standards, the device must be properly positioned and protected from any contact with electrical parts. The device must be fastened in such a way that it cannot be removed without the use of tools. Disconnect the main safety switch of the installation before proceeding to any maintenance. Disconnect the power supply of the device before proceeding to any maintenance. Do not place the device near heat sources, equipment containing strong magnets, in areas affected by direct sunlight or rain. Prevent electrostatic discharges and sharp objects from been inserted to the device. Separate signal cables from power supply cables to prevent electromagnetic disorders. Signal cables must never be in the same pipe with the power supply cables.
